

## Zeta Clear: Toenail Fungus Fears It!

Top Rated Nail Fungus Treatment

If you've got **toenail fungus**, it's hard to miss. Why? Because your nails look sick. In the early stages, toenail fungus may appear as a small white or yellow spot on the tip of a toenail, usually the big toe. As the fungus burrows deeper into the nail, the spots spread downward and outward, become larger, and look nastier. The surrounding skin can look scaly and inflamed. You may not want to wear sandals, go swimming, or let anyone see your feet!

A fairly common condition affecting 25% of the population at some point, [toenail fungus](#) is more common in adults than kids, especially adults with HIV or AIDS, people over 60, and those with diabetes or poor circulation. The fungus can infect fingernails too, but it's more common in toenails because it grows best in a moist, warm and protected environment. Socks, shoes, sweaty feet, and nail polish all help the fungus to thrive.

Below this, it lists benefits: "Exfoliate of yellowing keratin debris", "Topical Brush Application", "Natural, Safe and Effective", "No Prescription Required", and "100% Money Back Guarantee!". To the right, it says "ZETACLEAR ANTI FUNGAL SOLUTION" and "2 FREE BOTTLES LIMITED TIME OFFER!". The background shows a hand holding a yellow flower.

**Toenail fungus** feeds on a protein called keratin, from which nails are formed. The fungus goes underneath the nail where it can feed undisturbed. Besides discoloration, toenail fungus can cause nails to become flaky and powdery, or thick and deformed. The infected nail can develop ulcers under the nail from pressure to the skin. Ingrown toenails may appear. Other infections can occur, including athlete's foot.

As the fungal infection progresses, your toe may begin to hurt enough to make walking and wearing shoes difficult and painful. The nail can swell and turn brown or black, smell foul, develop pit marks or fall off. But even if it falls off, the new nail will be infected too. Surgery may be necessary to completely remove the toenail and treat the fungal infection.

Unfortunately, **toenail fungus** does not go away by itself. Most toenail fungus infections, if left untreated, become worse. The fungus can infect surrounding toenails. And the longer you wait to treat it, the harder it is to treat! In the early stages, a topical [toenail fungus treatment](#) will usually work to kill the fungus and solve the problem. But as the infection worsens, most topical fungus remedies are no longer able to penetrate deeply enough into the nail bed to kill the fungus. At this point, only oral toenail fungus treatments can work.

If toenail fungus progresses to the point where topical treatments become ineffective and you need an oral remedy, you might have to take it for six months or more. Oral medications for toenail fungus can cause serious side effects like fatigue, vomiting, skin rashes, enlarged lymph nodes, even organ damage.

Fortunately, there is a better way. It's called Zeta Clear and it's an effective, affordable, painless, safe and easy solution to the **toenail fungus** problem. It's also the [best toenail fungus treatment](#) on the market today. Unlike home remedies, you don't have to soak your toes for hours. And unlike prescription drugs, you will not suffer side effects. Simply brush Zeta Clear on affected nails 2-3 times daily. Zeta Clear toenail fungus treatment deeply penetrates and is absorbed into the nail bed to kill fungus dead in its tracks.

A newly-registered FDA formulation and all natural treatment for **toenail fungus**, Zeta Clear contains no toxic ingredients and is 100% safe to use. A blend of Tea Tree Oil, Almond Oil, Jojoba Oil, Vitamin E Oil, Lemongrass Oil and Undecylenic Acid (an organic fatty acid made from Castor Oil), all ingredients have various anti-fungal properties and, when combined, are very powerful. Some ingredients also contain antioxidant, antimicrobial and antibiotic properties to make Zeta Clear the best toenail fungus cure you can get without a prescription.

Zeta Clear toenail fungus treatment allows the infected nail to grow out while halting the spread of infection. This usually takes about 2 months, but treatment of 6 months is recommended to prevent reinfection. Zeta Clear has been found to produce excellent results, and it has the advantage of not producing the itching and dryness caused by remedies with irritating active ingredients.

If your fungus infection is in the early stages, buy Zeta Clear now and avoid all the hassles that come from leaving it untreated. And if your toenail fungus infection is advanced, no worries. Zeta Clear toenail fungus treatment will still get rid of the problem. ToenailFungusCured.com strives to find the best treatments for your **toenail fungus** infection.
